Duration: 1 week

Category ID: STC

Course Code: STC-11

Syllabus

courses Syllabus

Introduction:

Safety Management Systems (SMS) necessitate systematic assessments to gauge their efficiency and effectiveness. These audits must align with both company aspirations and national legislative requirements. A proficient auditor critically examines SMS to identify weaknesses and recommend improvements. Conversely, workplace inspections, conducted by supervisors, focus on physical assessments to pinpoint unsafe conditions and acts.

Objectives:

Upon completion of this training courses, participants will:

- Understand the legal framework and appreciate all audit activities.
- Gain knowledge about Safety Management System elements.

Day 1: Introduction to Audits, Legislation & Contractors

Detailed:

- Introduction to safety audits and inspections.
- Legal aspects including Seveso, COMAH, and PSM 1910.119.
- Contractor selection, induction, and risk management.
- Understanding risk assessments and evaluating their effectiveness.

Day 2: Elements of a Safety Management System – Audits

Detailed:

- Types of Safety Management Systems: Mechanical Model vs. Socio-Technical Model.
- Elements of Safety Management Systems and SMS policy statements.
- Proactive and reactive monitoring techniques.
- Qualifications and responsibilities of auditors.

Day 3: Audits

Detailed:

- Pre, on-site, and post-audit activities.
- Classification of audit findings.
- Measurement techniques and tools.
- Specific audit systems for various workplace scenarios.

Day 4: Inspections

Detailed:

- Observation techniques and physical site inspections.
- Confined space entry, lifting equipment, work at height, and other inspection focuses.
- Evaluating safety culture through inspections.
- Identifying opportunities for improvement.

Day 5: Emergencies

Detailed:

- Internal and external emergency plans.
- Auditing emergency plans for effectiveness.
- Reporting audit findings and recommendations.
